

Winter Crop Update 2022 Season

WHEAT

- A new APH variety released by Pacific Seeds.
- A Lancer/Reliant cross that is slow maturing, with planting suitable from mid April to early May.
- Increased yield over Sunmax and Lancer.
- Solid disease package and medium plant height.

BARLEY

- A new feed barley variety released by AGT.
- Early maturity, similar to Spartacus CL.
- Exceptional yield performance in the northern region.
- Very well suited to stressed environments but will also perform well in higher yielding environments.

DURUM

- A new durum variety released by Seednet from the Tamworth breeding facility.
- Improved yield over Lillaroi, Bindaroi, Vittaroi, Caparoi.
- Shorter plant type resulting in better lodging tolerance than Westcourt.
- Higher grain protein than Westcourt.

FABA BEAN

- A new faba bean variety released by Seednet.
- Seed size larger than Warda but smaller than Nasma and Nanu.
- Yield is equal to or better than Nanu, Nasma and Warda.
